

SEMI-AUTOMATIC GEARBOX CUTAWAY TRAINING SET

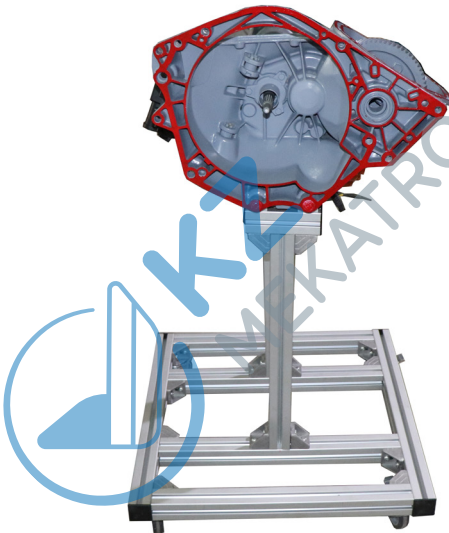

The Semi-Automatic Gearbox Cutaway Training Set has been designed to support trainings concerning the operation of the system by applied learning. The cutaway structure allows the observer to practically observe the operating mechanism from different angles. The areas and components represented in cutaway form are each assigned different colors. Shifts in the gear as well as the structure of the crankcase can be observed comfortably. The platform on which the system is mounted, is equipped with locking casters which provide easy movement. The panel is made completely of durable materials.
