

CHARGING SYSTEM TRAINING SET

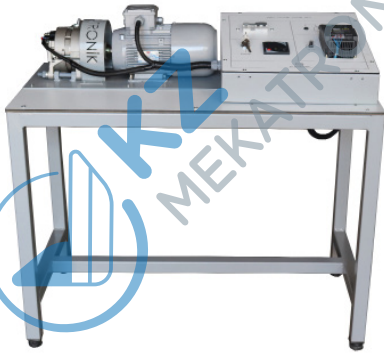

The Charging System Training Set - the system is set to motion by the starter key. The revolutions of the motor that drives the charging generator can be adjusted. Charging voltage and current should be measured continuously. Movable parts are firmly ensconced behind transparent plates. Our design prioritizes user safety. The educational panel features educational symbols and information regarding the working mechanism. System equipment as well as the working of the system can be observed from every angle. The system is safely placed within a metal sheet case.

TRAINING SET

TRAINING SET MODULES

- Charging Generator
- Asynchronous Motor to Drive the Generator
- Adjustable speed of generator
- Battery and plastic battery case
- Metal Sheet Case to Protect the Product from Damage
- Inverter
- Start/Stop button
