

ACTIVE SUSPENSION TRAINING SET

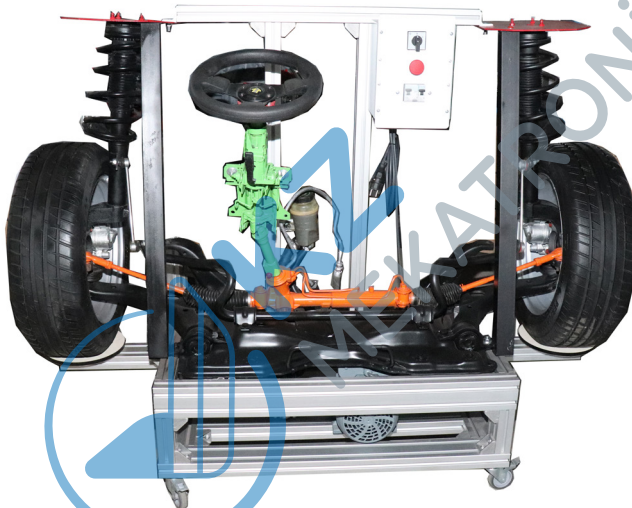

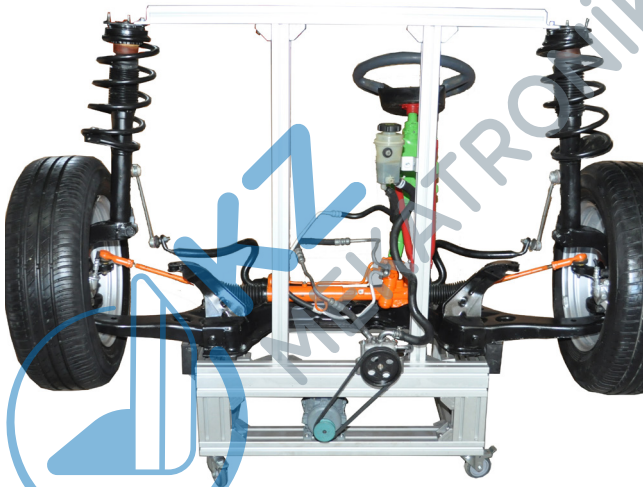

It allows the simulation of real hydraulic power steering system, thus making it possible to compare hydraulic steering and standard steering. The manometers can be used to observe pump pressure and the power cylinders of left and right tires. The lever mechanism can be used to observe differences in the front tire pressure level. It is possible to measure interior and exterior rod span. System equipment as well as the working of the system can be observed from every angle. The platform on which the system is mounted, is equipped with locking casters which provide easy movement. The panel is made completely of durable materials.

TRAINING SET

TRAINING SET EQUIPMENT

- Front Suspension and Wheels
- Steering Shaft
- Steering Wheel
- Hydraulic Power Steering Oil Pump
- Hydraulic Power Steering Unit
- Track Rod
- Driving Motor
- Pressure Gauge
- Power Board
